PROBLEM STATEMENT

In today's fast-paced digital world, travelers demand instant, intelligent, and personalized support when planning trips. Traditional travel agencies often rely on manual processes, resulting in delayed responses, limited scalability, and poor user experience.

There is a growing need for an AI-powered travel assistant that can autonomously understand user preferences, suggest personalized itineraries, and handle complex travel queries in real time.

Proposed Solution:

An AI Research Agent that uses Natural Language Processing (NLP), Retrieval-Augmented Generation (RAG), to assist users in conducting efficient literature reviews, generating summaries, identifying research gaps, and recommending relevant papers, datasets, or collaborators.

TECHNOLOGY USED

IBM cloud lite services

Natural Language Processing (NLP)

Retrieval Augmented Generation (RAG)

IBM Granite model

IBM CLOUD SERVICES USED

- ❑ IBM Cloud Watsonx AI Studio
- ❑ IBM Cloud Watsonx AI runtime
- ❑ IBM Cloud Agent Lab
- ❑ IBM Granite foundation model

WOW FACTORS

This agent will significantly reduce research time, improve the quality of literature reviews, help early-stage researchers find direction, and foster interdisciplinary collaboration by making knowledge more accessible and actionable.

Unique features:

Semantic search across research papers, journals, and datasets

Auto-summarization of selected papers

Citation and reference analysis to trace influence

Recommendation of research papers based on a user's current topic

Trend analysis over time for specific keywords or domains.

Collaboration mapping: suggests potential co-authors or institutions based on similar research interests.

END USERS

- ☐ Academic Researchers
- ☐ Research Institutions and Universities
- ☐ Industry R&D Teams
- ☐ Educators

RESULTS

Agent preview

Research Agent 02:54 PM

Welcome to Research Agent

The agent can generate reports, suggest hypotheses, and even draft sections of research papers.

Deployed AI Agent

CONCLUSION

- The AI-Powered Travel Agent project successfully demonstrates how IBM Cloud services and Watsonx.ai can be leveraged to create a conversational, autonomous, and intelligent travel assistant. By integrating Watsonx.ai for natural language understanding and agentic task execution, the system enables users to plan personalized trips through interactive dialogue, reducing the need for manual research or traditional travel agency interaction.
- Throughout the project, IBM Cloud served as the backbone for building, deploying, and managing the AI solution. Watsonx.ai enabled dynamic prompt-based reasoning and decision-making, while cloud scalability ensured consistent performance and availability.

FUTURE SCOPE

- ☐ Multilingual Research Support
- ☐ Voice-Activated Research Assistant
- ☐ Real-Time Collaboration Features
- ☐ Research Gap and Novel Topic Identification
- ☐ Integration with Publishing Platforms
- ☐ AI-Assisted Paper Drafting

IBM CERTIFICATIONS

In recognition of the commitment to achieve
professional excellence

Vivek Jadhav

Has successfully satisfied the requirements for:

Getting Started with Artificial Intelligence

Issued on: Jul 15, 2025

Issued by: IBM SkillsBuild
